Called to order 11:02 AM ET

Garrett Nickel on 2nd week of holiday; Josh Brickman hosting and taking notes.

Reviewed minutes from last week.

Theibo to go find out about the owner of the Cisco spreadsheet. He is also still on holiday

Everyone was supposed to read the Shared Security Model (no sense of who did that or not)

Update on where we are with the face to face:

- 19 confirmed
- 1 virtually participating --Tim
- If anybody has any updates to that they can go to discussion number 94 in GitHub or they can e-mail Josh.

Lots of discussion on the difference between a TOE Platform and the Trusted Platform. Worked on a definition in the glossary. Please review for next week.

Discussion on how the NDcPP fits in. It is not at the app layer; NDcPP would not rely on a Trusted Platform.

New issue raised; how do we handle Hybrid Cloud. Fernie to log an issue.

Brandon to create a new section to talk about TOE platform and how it needs to be adopted by authors.

Trusted Platform is political; it is for schemes to decide.

Josh is on vacation in one week-- Aug 23rd meeting to be hosted by Brandon.
