

CC in the Cloud Technical Community (Cloud-TC) – Meeting Minutes

7:43 AM PST 1/8/2025

Call to Order: 0800
Meeting Lead: Joshua BRICKMAN
Attendees: 17
Member Roster: 83
Next Meeting: Wednesday January 22nd, 2025

Highlights:

- Microsoft Intune has achieved CC certification.

Old Business:

- Review of previous meeting minutes by Garrett N.

New Business:

- Josh B. began with a welcome to members and an official kickoff to 2025 for the Cloud-TC.
- Josh B. announced that Intune has finally been certified as of December 31st, 2024.
- Josh B. invited Mike Grimm from Microsoft to provide comments on the certification.
 - o Mike G. described the evaluation process to be lengthy but productive, and reflected that where you end up isn't always where you started in an evaluation.
 - o While the MDM PP was written with cloud in mind, the devil is in the details with respect to certain aspects of each requirement, such as the start/stop of audit functions. Particularly when considering that a service such as Intune is always running. This perspective was challenging to consider and overcome.
 - o Josh B. commented on the "exact conformance" requirements of the PP which Mike concurred was an aspect that teased out some additional issues that required further detail and technical consideration.
 - o Josh B. asked about the requirements for installation aspects of the evaluated configuration.
 - Garrett N. commented on the evaluated configuration of the TOE as described in the Intune AGD Guidance Supplement.
 - Mike G. also described some aspects of the MDM agent components on iOS vs Android devices while referring to the architecture diagram in the Intune Security Target.
 - o Jade S. provided some comments from the NIAP side, noting that approximately 15 technical queries (TQ) had been received during this evaluation, however many of them were not addressed nor resulted in a Technical Decision being issued.
 - Jade S. stated that NIAP was unprepared to deal with several of these issues and as a result, kicked the can down the road for further analysis and discussion.

CC in the Cloud Technical Community (Cloud-TC) – Meeting Minutes

- Jade S. suggested the possibility of an interim cloud policy that could come in the months ahead in order to address some of these issues, however a new revision of the MDM PP will take some time since this evaluation was not representative of a typical cloud use case given the TOE developer is also the CSP and not a third-party.
- Jade S. advised that a “lessons learned” discussion will be held between NIAP, Lightship, and Microsoft which will result in some additional information and guidance that can be shared more broadly.
- Alicia S. mentioned one takeaway from reading the Intune evaluation documents posted to the NIAP website was that a key success for the evaluation was that MDM PP had cloud language and references built in, whereas most other PP’s are not that forward thinking or advanced yet.
 - Justin F. added that while Cloud is mentioned a lot as a platform in the MDM PP, it is not described further in SFR’s, Evaluation activities, etc. which can cause issues in interpreting requirements.
- Tyrone S. pointed out that the evaluated configuration can’t really be installed or controlled by the end user/customer, especially since the service/product is constantly being updated.
- Discussion on the road map for next PP’s to be tackled in being updated for Cloud.
 - Jade S. cautioned that there is a lot of work to do after the Intune evaluation in order to lay the groundwork for what will become the cloud standard to be adopted by other PP’s like GPOS etc.
- Josh suggested a more formal session in the coming months to discuss the outcomes of the Intune evaluation with an opportunity for Cloud-TC members to prepare some questions for NIAP, Microsoft, and Lightship.

Questions/Follow-ups:
