

CC in the Cloud Technical Community (Cloud-TC) – Meeting Minutes

7:54 AM PDT 8/21/2024

Call to Order: 0803
Meeting Lead: Brandon HARVEY
Attendees: 20
Member Roster: 83
Next Meeting: Wednesday September 4th, 2024

Highlights:

~

Old Business:

- Review of previous meeting minutes by Garrett N.

New Business:

- Resumed review of German Scheme comments:
 - Issue #152 *“German Scheme Feedback: CPU Equivalency”*
 - Discussion on the dependency of entropy on the CPU with respect to CPU Jitter/Jitter RNG.
 - If a cloud TOE is claiming Jitter entropy, particularly when it is provided by the operating environment, there may not be granular visibility into this source which could potentially be affected by the current load on the overall environment and could differ between each cloud provider.
 - The crypto module implementing CPU Jitter is also implementing all the health testing and conditioning required to function reliably in order to operate in a platform agnostic environment.
 - A user-space container could potentially read the underlying CPU value, however this value provided by the platform may not be accurate or fictitious.
 - Obtaining an ESV certificate would have to extend to the CPU and require that the actual CPU be identified.
 - There are several implementations of Jitter Entropy that function slightly differently, therefore we should be exact in our descriptions and responses regarding the use of the term “Jitter Entropy”
 - Brandon will draft a user-space container use case using jitter to illustrate a possible equivalency rationale.
 - To clarify the TOE platform SFR selections, the Guidance document will be updated to reiterate that the TOE and TOE platform are separate entities, and the TOE can fulfill SFR enforcing functionality by leveraging the TOE platform.
 - Brandon to re-write last paragraph of ‘Equivalence’ section of the Guidance document to include that certificates with matching OE details can be considered equivalent even if the cert doesn’t specifically call out the cloud platform.

CC in the Cloud Technical Community (Cloud-TC) – Meeting Minutes

- Issue tagged as “To Incorporate” and assigned to Brandon.
- Issue #153 *“German Scheme Feedback: Procedure for Deriving Cloud Evaluation Guidance for a PP or PP-Module”*
 - Assigned to Brandon and tagged as “To incorporate”.
- Issue #154 *“German Scheme Feedback: Identify the SFR Impact on Cloud Deployment”*
 - Nominally, a higher level mandatory SFR could include a selection for the on-prem specific SFR or you could modify the SFR to have selections for on-prem and cloud specifically.
 - Tagged as “question”.
- Issue #155 *“German Scheme Feedback: Determine Appropriateness of Security Problem Definition”*
 - Adding additional language to include assumptions in this section would be redundant, for general guidance there is sufficient context to draw the conclusion that assumptions could also be reused for other PP’s.
 - Issue Closed
- Issue #156 *“German Scheme Feedback: Determine Appropriateness of Security Problem Definition”*
 - Last paragraph of subsection (top of page 36) to be amended to include the term “TOE Admin” to be consistent with the overall section.
 - Tagged as “To Incorporate”
- Issue #157 *“German Scheme Feedback: Determine Impact on SARs”*
 - Page 36 Bullet 1 of the Guidance document will be updated to add additional detail to the “hardware pools” reference (storage, etc).
 - Assigned to Brandon H.
 - Tagged “To Incorporate”.
- Issue #158 *“German Scheme Feedback: Determine Impact on SARs, 2nd issue”*
 - Guidance document will be updated to include additional information on test configuration details.
 - Assigned to Brandon H.

Questions/Follow-ups:

- Jade S to follow up with CCDB on whether further comments/feedback is expected.

End of Meeting – Adjourned 0859 PDT
