

CC in the Cloud Technical Community (Cloud-TC) – Meeting Minutes

7:52 AM PDT 4/30/2025

Call to Order: 0801
Meeting Lead: Joshua BRICKMAN
Attendees: 13
Member Roster: 75
Next Meeting: Wednesday June 4th, 2025

Highlights:

~

Old Business:

~

New Business:

- Continued work on addressing Australian Scheme Feedback.
 - Reviewed Issue #178 *“Australian Scheme Feedback: (p20, 26, 29, and 45)—TOE Identification”*
 - This issue was addressed during the previous meeting
 - Tagged as “To Incorporate”
 - Reviewed Issue #146 *“Australian Scheme Question from review of Guidance”*
 - Tagged as “Question”
 - No document update required
 - To be reviewed and addressed during follow up meeting with Australian Scheme
 - Reviewed Issue #188 *“Non-Fatal Aesthetic Flaws in CCitC Guidance v1.1.1”*
 - Erin C has identified several aesthetic issues relating to document consistency and readability.
 - Tagged as “Enhancement”
 - Reviewed Issue #189 *“Overloaded Term: Implementation-based relating to SFRs”*
 - Brandon H commented we need to ensure that we are not conflating implementation based SFRs in which the TOE technology type or TOE implementation of functionality drives the selections within a selection based SFR. This is confusing with CC2022.
 - Justin F confirmed the term “implementation-based” was originally created by NIAP and reused in this project.
 - It is a subtype of SFR that is mandated based on TOE type whereby if a TOE offers certain functionality, then additional SFR’s become mandatory.
 - The collaborative Protection Profile for Hardcopy Devices Version 1.0E (CPP_HCD_V1.0E) section 1.4.2 *“USE CASE 2: Conditionally Mandatory Use Cases”* states:
“Conditionally Mandatory Uses are security-relevant capabilities that are

CC in the Cloud Technical Community (Cloud-TC) – Meeting Minutes

optional in the HCD, however if they are present, must be conforming ...”

- The Guidance Document is proposed to modify sub-section ‘*Identify the SFR Impact on Cloud Deployment*’ as follows:
*“It may be the case that a requirement simply does not apply to a cloud environment, in which case the PP author could consider defining that requirement as an implementation-based SFR that applies only to the on-premise use case. **For instance, implementation-based SFRs can be seen via Use Cases and "Conditionally Mandatory" SFRs in the cPP_HCD_v1.0e.**”*
- Tagged as “To Incorporate”
 - All open issues, including feedback items from the Australian Scheme, have now been triaged.
- Josh B proposed a new monthly meeting cadence to give Brandon time for implementing updates and prepare for the next release of the Guidance Document.
 - Next meeting will be Wednesday June 4th where a review of the finalized version of the Guidance Document will be conducted and the standard procedure for official release will be commenced. A meeting with the Australian Scheme will be proposed to review our responses to their feedback. This could potentially take place at ICCC or if needed, a call can be coordinated to suit all applicable time zones.
- Tyrone S announced a new ISO Call for Contributions regarding the ‘TOE concept’ possibly needing an adjustment to incorporate cloud and zero trust use cases and definitions. This will be the second call for contributions as first only rendered two responses.
 - Tyrone S to submit some of the CCitC work as a contribution to this effort.

Questions/Follow-ups:

~

End of Meeting – Adjourned 0830 PDT
